

David L Nieland

Subject: Assistant Professor of Geology in Alaska

The University of Alaska Southeast (UAS) is now accepting applications for a tenure-track Assistant Professor of Geology. The position directly supports the UAS undergraduate Bachelor of Science and Bachelor of Arts degree programs in Environmental Science and Geography.

Teaching responsibilities will include introductory undergraduate courses in physical, historical, and environmental geology as well as upper division courses and seminars in the candidate's area of expertise. We are especially interested in candidates with expertise in Earth surface processes, including but not limited to geomorphology, geochemistry, geohydrology, glacial geology, and coastal geology.

Ability to collaborate across disciplines with colleagues at UAS is required.

UAS is undergraduate-focused but faculty members have opportunities for advising graduate students through development of joint and/or affiliate appointments with the University of Alaska Fairbanks.

The position will remain open until filled; however, applications received by January 5, 2015 will receive first consideration. UAS faculty will be present at the annual American Geophysical Union meeting in San Francisco in December 2014, and informational meetings may be arranged during that time. The job is posted to <http://www.uakjobs.com> and can be found by searching for posting 0069627. You may also contact Jason Amundson for more information at jason.amundson@uas.alaska.edu
